

# crossCert

The logo graphic consists of a stylized 'C' shape formed by a thick line. The top part of the 'C' is green, the middle part is yellow, and the bottom part is orange. To the right of the 'C' is a green arrow pointing upwards and to the right.

Next-generation of Energy Performance  
Assessment and Certification

This project has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement No 101033778

# Overview of current EPC methodologies and Building Renovation Passports

**Perit Stephen Micallef**  
**22nd June 2022**

# Energy Performance Certification – Regulations

## ■ Regulation:

- Energy Performance of Buildings Regulations, 2018 – Legal Notice 47 of 2018, Transposing Directive 2010/31/EU of the European Parliament and of the Council on the energy performance of buildings
- Superseded regulation: Legal Notice 261 of 2008 / Legal Notice 376 of 2012

## ■ Body/institution responsible for:

Building and Construction Authority (BCA) – Ministry for Transport, Infrastructure and Capital Projects

# Energy Performance Certification - Regulations

- **Who can perform EPCs?**

"EPB assessors" duly registered with the Building Regulation Office - in possession of a warrant to practice the profession of architect and, or civil/structural engineer, or mechanical or electrical engineer, and who has also successfully undertaken a period of training on the assessment of the energy performance of buildings built in Malta

- **Certificate Validity:**

10 years (unless major renovations or alterations to the building/installation have taken place)

# Control and Verification

## ■ EPC is obligatory for:

- Buildings which are constructed, sold or rented out to a new tenant
- Buildings where a total useful floor area over 250m<sup>2</sup> is occupied by a public authority and frequently visited by the public.

## ■ Control and verification:

- BCA performs control and verification of EPCs
- A random selection of at least a statistically significant percentage of all the energy performance certificates issued annually is performed and subjected to verification.

## ■ Official Registry/Database:

EPC data is uploaded by the EPB assessors in electronic format (xml) together with a photo of the facade or front elevation, site plan and comments / recommendations on the dedicated web platform

# Procedures and Software

## ■ Procedures

A site visit by the assessor is obligatory for asset rating EPCs. The recommendation report shall indicate cost-effective measures.

## ■ Dwelling EPCs Software

National calculation tool developed is the 'Energy Performance Rating of Dwellings in Malta' (EPRDM)

Used for both design and asset rating EPCs

## ■ Non-dwelling EPCs Software

iSBEMmt methodology and software: Simplified Building Energy Model

Used for both design and asset rating EPCs.

# The Energy Performance Certificate

## ■ What does a typical certification entail?

Site visit (for asset rating EPCs), collect data in relation to the building envelope (walls, glazing, roof, shading) and systems (HVAC, lighting, renewable energy)

## ■ EPC documents:

EPC xml file, facade photo or front elevation plan, building site plan, recommendations report

## ■ Basic info of EPC:

- Building type
- Energy rating for dwellings (kWh/m<sup>2</sup>.year, CO<sub>2</sub> emissions)
- Energy label (A-G) for non-dwellings
- Description of the energy characteristics of the building (building envelope and technical systems)
- Potential energy efficiency interventions

# EPC Specimen (dwellings)

Malta Resources Authority

Ministry of the Environment  
& the Built Heritage

Building Information Office  
Services Division

Certificate Reference Number:  
**D 0999 00007 2807/2009**

Registration Date: 28 July 2009

Registered by the Malta Resources Authority in accordance with Legal Notice 263 of 2008

**ENERGY PERFORMANCE CERTIFICATE OF DWELLINGS MALTA**

**Rating type:**  
Asset

**Building Type:**  
Flat / Apartment at Level 4

Energy Use: 210 kWh/m<sup>2</sup>.yr

Carbon Dioxide Emissions: 53.5 kg/m<sup>2</sup>.yr

**Property Details**

Locality: Fgura

Street: Triq il-Halel

Property Name or No: No. 53, Flat 7  
*(Refer to site plan on page 2 for property co-ordinates)*

MEPA Application No:  
Not Applicable

Year of Major Renovation (where applicable):  
Not Applicable

Useful Floor Area (m<sup>2</sup>): 85

**Photograph of property façade**

Assessor Name: John Borg

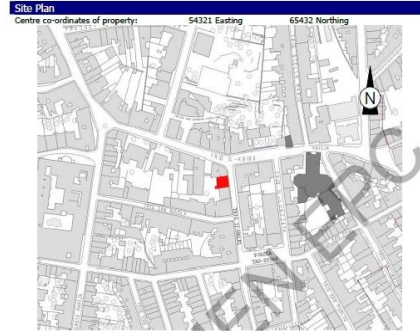

Assessor Registration No: 0999

Assessor Signature & Stamp:

**Expiry Date of Certificate**

27 July 2019

This certificate is valid for a maximum period of 10 years from the date of registration provided there are no construction, fittings, or equipment changes in the building during this period.

- Advisory report / Recommendations**
- 01 This top floor apartment depends on electricity for its hot water needs. Installing a solar water heater on the roof will reduce the electricity consumption.
  - 02 This apartment would benefit if one were to install additional air conditioning to make the heating system more efficient thus avoiding the use of electric heating for the winter months.
  - 03 Installing more low energy light fittings will reduce the energy consumption by 10-15%. The cost for such a measure is relatively low and the benefit is considerable.
  - 04 Reduce summer overheating through the east and west facades by applying a reflective coating on the glazing. Alternatively replace the aperture units with double glazing using an outer tinted or reflective glass pane – this reduces summer gains and winter losses.
  - 05 This is a top floor apartment that loses heat in winter and absorbs heat in summer from the roof. Shading the roof by means of a raised floor and / or installing insulation on the roof would reduce heating and cooling needs during the year. A less costly and less effective measure would be to coat the roof screed in a light colour to reduce heat gain in summer. However no benefit would be accrued in winter with this latter measure.
  - 06 Reduce solar gain by installing a shading device over/in front of the southern facing window overlooking the terrace. This shading device may have the added benefit of providing summer shade on the terrace.

**Additional information**

This certificate has been based on the following main building characteristics, material composition of elements and systems

<b>Opaque elements (including finishes)</b>	Walls: Globigerina limestone single leaf (230mm) external walls at the back rendered in light colour; double leaf external walls (230mm – 50mm – 230mm configuration) at the front. Roofs: 175mm RC slab with 150mm torva and 75mm concrete screed with concrete tiles on top. Surface is finished in grey colour. Floors: Floor slab is assumed 175mm concrete, 100mm torva and ceramic tiling – the floor lies over another apartment.
<b>Glazed elements</b>	Windows: Aluminium frame. A few windows at the rear are double glazed. All others are single glazed. Doors: Main door is in timber. Back door overlooking terrace is single glazed with an aluminium frame. The front doors overlooking balcony are single glazed aluminium framed doors. Rooflights: None. Shading Devices: A horizontal shading device is present on the façade. The apertures overlooking the back terrace have horizontal shades on top.
<b>Systems</b>	Space Heating: Space heating is assumed as direct electric heating in all areas. Space Cooling: Less than 40% of the area of the living room is air conditioned. All areas are considered as being cooled by non-inverter type air-conditioners. Domestic Hot Water: Storage type electric water heaters in kitchen and bathroom.
<b>Renewables</b>	Solar Water Heater(s): None installed. Photovoltaic panels: None installed. Wind Turbines: None installed. Water cistern: None. Others: N/A

# The Future: Building Renovation Passports

A **Building Renovation Passport** is a document – in electronic or paper format – outlining a long-term (up to 15-20 years) step-by-step renovation roadmap to achieve deep renovation for a specific building.

It supports owners with personalised advice on their renovation options and clarifies the renovation stages for all involved parties.
